

# Finigan's Logic™

by Arkéo™

## On-Screen Help Instructions . . .

On-screen Help with illustrated instructions is provided for your benefit. From the game's menu, select "Help Instructions" to see the following information:

- Game Objectives.
- Playing Instructions.
- Scoring.
- How to move your pet fish.
- Bonus Turns and Falling Junk.
- Hints & Helps.

## Important Clues . . .

It is important to understand clues given by the computer. See pages 4 and 5 of the computer's on-screen Help Instructions. For each 3 digit "try" listed under Guess:

- D column shows how many digits are correct for each try.
- P column shows how many digits are in the correct place for each try.
- If you are playing with Hints, the correct digits are shown in color.

## Miscellaneous Stuff . . .

- To quit the game or Help at any time, just press the Esc Key.
- A bell **sound** rings when playing time is almost over for each turn.
- Most computer keyboards have a 16 keystroke buffer. If you press too many keys and fill the buffer, your pet fish will keep moving in the direction of those keystrokes until executed. Also, the computer's internal tone may sound.
- When starting a 2 Player game under Windows, the game may appear to stop when you enter the opponent's ??? number. Don't worry, this "pause" occurs only on the first entry as the number generator sets its control path.

## Please, No Pirating Agreement . . .

In simple language, you bought this game to have fun. You may install it on all the computers that you personally own. But, please . . . don't allow stealing by making copies for friends. Let your friends buy their own copy like you did. Thank you.

The above is a "personal use only" agreement. School or business use requires purchasing one copy of program per computer. Networking not permitted. Quantity discounts available.

---

### Arkéo, Inc.

Customer Service: (817)498-7708  
Box 820124 • Fort Worth, Texas 76182-0124

**Minimum computer requirements: . . .**

IBM or 100% compatible, 640K RAM, DOS 3.0 or higher, 2MB free space on hard disk, VGA graphics, and 3.5" floppy drive. Optional sound files are Sound Blaster compatible.

**To install game . . .**

At the floppy drive DOS prompt, type "install" and press the Enter key. Follow directions displayed on the screen. You select either DOS or Windows operating system to install the program. A program directory titled "FINLOGIC" is created on your hard disk.

**To play game . . .**

**Under DOS operating system . . .**

Select the FINLOGIC directory on hard disk (type "CD\FINLOGIC" and press Enter key). At the directory's DOS prompt, type "FINLOGIC" and press Enter key to start the game.

**Under Windows operating system . . .**

Start Windows. From the File menu select Run. In the Run window, type "FINLOGIC" on the command line and press the Enter key to start the game.

---

**Troubleshooting Sound . . .**

**If you do not hear sound, you may want to check the following . . .**

1. Sound Blaster or compatible sound card and drivers are required to hear sound files.
2. Audio speaker connections, volume levels, power, etc.
3. Your system configuration:
  - a. For best results, set sound card to IRQ7 or IRQ5. It will be automatically detected.
  - b. Set DMA to channel 1, with the sound card set at port 220 or 240.
  - c. Resolve any system conflicts with these options to play sound. Generally, Sound Blaster card default settings (out of the box) agree with these options.

Note: For sound on Tandy Sensation computers, install and run game under Windows. If sound is not heard, you may need to install the "Tandy Virtual DSP Driver" under Windows. Please read computer documentation for help to install driver.
